2 ways to sterilise

The Cold Water Method

1. Sterilise
   - Detergent, teats and accessories thoroughly with warm soapy water.
   - Remove any milk residue. Rinse with cold water.
   - Wash your hands.
   - Fully submerge items in the solution to remove any trapped air bubbles.
   - Screw on the Combi lid. Press the safety vent down if it is raised.
   - Leave for 10 minutes.
   - Before use, swill the bottle with warm soapy water and rinse in cold water.
   - Soapy items should be removed for the final rinse.

   Important Information
   - There is no need to rinse.
   - Remove the solution every 24 hours.

   There is no need to rinse.
   - Remove the solution every 24 hours.

   Important: The Milton Combi is specially designed for use with Milton Sterilising Tablets or Fluid. Other items are not suitable. It is essential to flush your Combi with cold water after each sterilisation cycle to prevent a build-up of scale.

   3. Add Items to the Solution
   - Pour 200ml of water in your Milton Combi base.
   - Clean bottles, teats and accessories thoroughly with warm soapy water. Do not put Milton Sterilising Tablets or Fluid inside the Milton Combi when sterilising items.
   - For safer handling, leave the Milton Combi to cool down. Ensure that you take care, as it will contain hot water and steam.

   4. Microwave
   - Load bottles with the opening face down.
   - Screw on the Combi lid. Press the safety vent down if it is raised. When steam pressure builds up inside the Combi the safety vent will pop out automatically.
   -米om the microwave - it's an essential baby bag!

   - With the Cold Water method of sterilisation, items can be left in the solution until you need them and can be placed in the refrigerator for 24 hours. Items can be added and removed from the same solution throughout the day.

   Did you know?
   - If the Milton Combi is left unopened after microwaving and the safety vent is raised, do not reject the Milton Combi. It is safe to use if cool down.
