Milton
MAXIMUM PROTECTION

Combi Microwave or Cold Water Steriliser

THANK YOU FOR
CHOOSING MILTON!

FITS MOST SIZE BOTTLES AND
IN MOST MICROWAVES

IMPORTANT INSTRUCTIONS, PLEASE READ

Congratulations on choosing your new Milton Combi Steriliser with unique safety vent technology for better, faster steam sterilisation. Before using it for the first time, please take a little time to read this leaflet really carefully. Then keep it somewhere to hand, as it contains important information that you might need to refer to again.

If you do mislay the leaflet, don't worry, you can download a copy at:
www.milton-tm.com

YOUR FIRST COMBI USE

Before you first use your new Milton Combi, familiarise yourself with its layout and parts. Then wash all the Combi parts in warm soapy water and rinse in cold water.

YOUR MILTON COMBI PARTS GUIDE

- A** Pop-up safety vent
- B** Screw lid with submerger and seal
- C** Handle
- D** Base
- E** Fill line (5L) for cold water sterilisation

2 ways to sterilise choose the most convenient for you!

1 The Cold Water Method

1 CLEAN

- Clean bottles, teats and accessories thoroughly with warm soapy water. Remove any milk residue. Rinse with cold water.

2 PREPARE THE MILTON SOLUTION

- Fill your Milton Combi with cold water to the 5L mark. Add 1 Standard Milton Sterilising Tablet or 30ml of Milton Sterilising Fluid.

3 ADD ITEMS TO THE SOLUTION

- Wash your hands.
- Fully submerge items in the solution to remove any trapped air bubbles.
- When you screw on the Combi lid the integral submerger will then ensure that all items are kept in the solution. Screw on lid. Press the vent down if it is raised. Items are ready to use after **15 minutes**.
- Remove the items you need and shake off excess water – **THERE IS NO NEED TO RINSE**. Replace the solution every 24 hours.
- **IMPORTANT:** Your Milton Combi is specially designed for use solely with Milton Sterilising Tablets or Fluid. Other sizes or makes of tablet/liquid could damage your Milton Combi and affect its performance.

Did you know?

With the Cold Water method of sterilisation, items can be left in the solution until you need to use them and will stay sterile in the solution for 24 hours. Items can be added and removed from the same solution throughout the day.

How to get the best use from your Milton Combi:

- Check the power of your microwave before you begin using it.
- Dry your Milton Combi well after each use to prevent a build-up of limescale.
- For optimum effectiveness descale once a month.
- The individual parts of the Milton Combi can be cleaned in the dishwasher.
- To remove the submerger from the lid for cleaning, insert fingers into the holes as shown and twist anti-clockwise. Reverse the procedure to re-attach to the lid.
- It is only necessary to use the submerger when using the cold water sterilising method, although for convenience it can still be left attached to the lid when sterilising in a microwave.

Ask the experts:

Why should I sterilise?

During your little one's first 12 months, their immune system is still developing so they need extra protection from germs that may cause gastroenteritis and other nasty bugs. To do this, you need to make sure that all feeding equipment is clean and properly sterilised.

How long should I sterilise for?

Right up until your baby's first birthday

What should I sterilise?

Basically everything that can go into your baby's mouth! This includes bottles, teats, soothers, plastic feeding spoons, weaning bowls, teething rings, toys as well as your breast feeding accessories such as breast pump parts and milk storage containers.

Did you know?

At 6 months old, your baby's immune system is at its weakest and even at 1 year they will only have around 17% of adult immunity levels against the germs that cause diarrhoea and vomiting.

www.milton-tm.com

2 The Microwave Method

1 CLEAN

- Clean bottles, teats and accessories thoroughly with warm soapy water.
- Remove any milk residue. Rinse with cold water.

2 FILL

- Pour 200ml of water in your Milton Combi base. Then load items upside down.
- **IMPORTANT:** Your Milton Combi will not sterilise properly unless the correct amount of water is added. You can use a baby bottle to measure exactly 200ml of water.

3 LOAD AND CLOSE

- Load bottles with the opening face down.
- Screw on the lid. Press the safety vent down if raised. When steam pressure builds up inside Combi the safety vent will pop out automatically.

4 MICROWAVE

- 2 mins at 1100-1850W
- 4 mins at 850-1000W
- 6 mins at 500-800W

5 COOL AND USE

- For safer handling, leave the Milton Combi to cool inside the microwave for at least 3 minutes after the microwave cycle has finished. Remove the Milton Combi using oven gloves to prevent scalding.
- Wash your hands well before handling sterilised items. Unscrew the lid and take the contents out using tongs.
- If you don't want to use your bottles straight away after microwaving, press the pop-up safety vent back down to keep the bottles inside the Milton Combi sterile for longer.

Did you know?

If the Milton Combi is left unopened after microwaving and the safety vent is closed, items will remain sterile in the Milton Combi for up to 24 hours.

WARNINGS FOR USE IN THE MICROWAVE:

- Check the power of your microwave before you begin using it.
- Check that the accessories you want to sterilise can be microwaved.
- Always keep the microwave turntable clean and dry before use. For smaller microwaves, the turntable may need to be removed to allow the Milton Combi to fit in.
- Always ensure that your Milton Combi is clean with no old water residue before use in the microwave.
- The Milton Combi contains boiling water when in use. Handle with care and keep out of the reach of children.
- Always wait 3 minutes before removing the Milton Combi from the microwave to let it cool down. Ensure that you take care, as it will contain hot water and steam. Always place it on a hard, heat-resistant surface.
- Use oven gloves and once the lid is unscrewed, open it away from you to allow the steam to escape.
- Do not put Milton Sterilising Tablets or Fluid inside the Milton Combi when you place it inside your microwave.
- Do not use metallic items in your Milton Combi as this could damage your microwave.

THIS PRODUCT MAY BREAK IF DROPPED WHILE FULL OF WATER.

Also available from Milton:

new

Milton Solo Microwave or cold water Travel Steriliser

A handy, compact, unique safety vent technology single bottle steriliser that's perfect for travel, overnight stays or when you're away from home. Use with cold water or in the microwave - it's an essential for your baby bag!
